

# **Release Notes for the Universal ScatterProof Backup & Restore Utility**

## **Release Notes**

- The Backup & Restore utility will create a backup folder with the following items
  - Assembly Folder Setups
  - Input Hot Folder Setups
  - Cleaning options
  - The location of the Program windows
  - Color Mapping Setups
  - Any Dot gain files used in Universal ScatterProof
- The backup folder name will be 'Uscat\_Backup\_month\_day\_year\_time'.
- The Backup & Restore utility can not restore network shares or connections. After a restore, you will need to manually restore all network shares or connections that Universal ScatterProof references in the Assembly Setups or the Input Hot Folder Setups.
- When restoring, all settings of the same name will be overwritten.

## **Pre-Installation Notes**

- You must have Universal ScatterProof installed for the Backup & Restore utility to install or run.
- Close all programs before installing the Backup & Restore utility.

## **Installation**

1. Run the 'Universal ScatterProof Backup and Restore V1.13.exe' program in the 'Backup and Restore' folder on the Installation CD.
2. Press Next.
3. Choose the location where you wish to install the program. Press Next when done.
4. Deselect 'Launch application after ...' if you do not wish to run the Backup & Restore utility now.
5. Press Finish.

## **Backing up your Universal ScatterProof settings**

1. Double Click on the 'Backup & Restore' icon on the desktop.
2. Press the Backup button.
3. Choose a location to store the backed-up files.
4. Press OK.
5. The Status area will display 'Backup Complete!' when done.
6. The Status area will display the number of files backed up and the location of the folder where the files are stored.
7. Press Done when complete.
8. If the backup folder created is on the Universal ScatterProof computer, you may want to copy it to a network drive or to removable media. This way you have the backup available if the Universal ScatterProof computer needs to be reloaded.

### **Restoring your Universal ScatterProof settings**

1. Double Click on the 'Backup & Restore' icon on the desktop.
2. Press the Restore button.
3. Choose the backup folder created by the Backup & Restore utility.
4. Press OK.
5. The Status area will display 'Restore Complete!' when done.
6. The Status area will display the number of files restored and the location of the folder where the files were restored from.
7. Press Done when complete.
